Magnum Supps Homepage — CRO Audit Report

Prepared: May 26, 2026

Site Audited: magnumsupps.com

Reference Sites: Ghost Lifestyle, Bare Performance Nutrition, PVL, HD Muscle, Gymshark

Executive Summary

Magnum Supps has a competent Shopify storefront with genuine social proof (671 reviews, 4.97 stars), a solid goal-based shopping framework, and a first-order discount popup --- but the site is leaving significant revenue on the table across five critical dimensions: it has **no loyalty program** (Ghost has this as a top-nav item and a full earn/redeem system), **no product recommendation quiz** (BPN makes this a primary nav destination), **no interactive bundle builder** (Ghost drives AOV with pick-any-3 at 20% off vs. Magnum's static pre-built stacks), **hero banners that lead with campaign slogans instead of brand value**, and a **mobile menu so sparse it borders on useless**. These are not polish issues --- they are structural conversion gaps against direct competitors shipping the same supplement categories.

Section-by-Section Findings

1. HERO SECTION

Current State: Rotating carousel with campaign-specific banners. Active slide: "SUMMER PREP STARTS NOW / BEACH SEASON IS COMING" with CTA "BEACH PLEASE." Second slide: "BUILD. BURN. BEACH READY / BUY ANY 2, GET 1 FREE / SHOP THIS OFFER." Product imagery features stacked Limitless/Quattro/Mimic. No persistent brand value proposition. "STACK & SAVE 30%" badge overlaid on product image.

Verdict: IMPROVE

Why: Campaign CTAs ("BEACH PLEASE") are clever but meaningless to a cold visitor who doesn't know the brand. There is zero statement of who Magnum is, what makes them different, or why you should trust them over 500 other supplement brands on Shopify. The rotating carousel is a known CRO killer --- it splits attention, causes content layout shift on slower con-

nections, and means any given visitor sees only one of multiple messages. The sub-headline and CTA are promotional (“free product”), not benefit-driven (“train harder, recover faster”). No social proof element appears in or near the hero.

Reference Benchmark: BPN’s hero (“GO ONE MORE / JOIN THE 925,000+ CUSTOMERS”) immediately establishes community scale and brand longevity, with a dual CTA strategy (primary: sport-specific, secondary: all supplements). Ghost leads with product-specific hero tied to a new launch, but anchors it in a clear offer. Both communicate brand scale within the first screen.

Recommended Action: Replace the rotating carousel with a single, static hero (or a hero that only cycles on user interaction). Lead with the brand’s proof point: *“Delivering Results Since 2005 --- Trusted by Elite Athletes Worldwide.”* Keep the seasonal offer visible as a secondary banner strip or product badge. Move the primary CTA from “BEACH PLEASE” to “SHOP BEST-SELLERS” or “FIND YOUR STACK.” Test a hero variant that features a top athlete + product + trust line rather than a beach lifestyle image.

2. NAVIGATION & MENU

Current State:

- **Desktop:** Flat nav --- Supplements (dropdown), Magnum Essentials (dropdown with 4 hero products), Stacks, Team Magnum. Search icon. Currency/country selector. Cart. Sign In. No mega menu, no “Build Your Bundle” link, no loyalty link.
- **Mobile:** 4 items: Supplements (with expand arrow), Magnum Essentials, Stacks, Team Magnum. LOG IN button at bottom. Social links at bottom. No search in mobile menu. No goal-based entry point.

Verdict: IMPROVE

Why: Desktop nav is functional but leaves product depth undiscoverable. The mobile menu is critically underdeveloped: 4 items with zero goal-based entry points, no search, no loyalty, no quiz. Visitors who land on mobile (likely >55% of traffic on a supplement brand targeting a fitness audience) have almost no wayfinding options beyond scrolling the homepage. “Magnum Essentials” and “Stacks” as nav items are brand-internal terms that mean nothing to a first-time visitor.

Reference Benchmark:

- **HD Muscle (desktop):** Mega menu organized by workout phase (Pre-Workout, Intra-Workout, Recovery, Protein, Health + Wellness). Each category shows individual products by name, with direct links. A visitor who wants to “build their pre-workout stack” can see all options in one view without navigating away.
- **Ghost (desktop):** LOYALTY appears as a top-level nav item. SUPPLEMENTS dropdown has “BUILD YOUR OWN BUNDLE” as a featured option. Goal-based sub-nav (Build Muscle, Energy & Endurance, Recovery, Weight Management, Wellness) is inside the dropdown.
- **Gymshark (mobile):** Top-level split by segment (Women / Men / Accessories / Explore), with trending/new/best sellers visible one level down. Loyalty and Blog are accessible within the menu.

Recommended Action:

1. **Desktop:** Add “LOYALTY” as a top-level nav item. Rename “Magnum Essentials” to “New Arrivals” or “Essential Stack” for clarity. Add “BUILD YOUR STACK” as a featured link inside the Supplements dropdown.
2. **Mobile:** Restructure to goal-based top level: Build Muscle / Fat Burning / Performance / General Health, with a Search bar at the top of the menu. Add Loyalty and Quiz links as secondary items. Match Gymshark’s depth with one more expansion level.

3. EMAIL CAPTURE / LEAD GENERATION

Current State: Klaviyo popup fires on homepage load (before any scroll). Fields: Email + First Name. Offer: “HOW ABOUT A DISCOUNT ON YOUR FIRST ORDER? GET MY CODE.” No goal segmentation, no interest capture, no specificity on the discount amount. Footer has an in-line email form: “JOIN OUR NEWSLETTER / Subscribe and stay up-to-date on all things Magnum” --- no incentive whatsoever.

Verdict: IMPROVE

Why: The popup fires too early (on page load, before value is demonstrated), lacks specificity (“discount” vs. “15% off”), and captures zero data about the subscriber’s goals --- so the first email they receive will be generic. The footer inline form has no incentive at all, making it a dead capture mechanism. Triggering after 30 seconds or 20% page scroll would filter out accidental opens and increase quality of captures.

Reference Benchmark: Ghost Lifestyle’s popup appears after scroll engagement and is structured as a **goal-selection quiz gate**: “YOU’VE GOT 20% OFF --- Let us know your goal to claim your discount” with 6 clickable options (Build Muscle, Energy & Endurance, Recovery,

Weight Management, Wellness, Other). The visitor self-segments before they even enter their email. Ghost gets the discount *and* the goal data in one step.

Recommended Action:

1. Change popup trigger to 20% scroll depth or 30-second timer. This pre-filters high-intent visitors.
 2. Add a goal selection step before the email field: “What are you training for?” with options for Build Muscle / Lose Fat / Boost Performance / General Health. Show the appropriate product recommendation on the next screen.
 3. State the specific offer in the popup headline: “Get 15% Off Your First Order” (or whatever the actual value is). Vague “discount” kills trust.
 4. Replace the footer inline form copy: “Join 50,000+ Customers --- Get 15% Off” performs better than “stay up-to-date on all things Magnum.”
-

4. PRODUCT DISCOVERY & ORGANIZATION

Current State: “BEST-SELLERS / MAGNUM COLLECTION” section with 8 products displayed in a grid with star ratings, goal tags (“For: Recovery Strength Muscle Gain”), pricing (CAD), and “Add to Cart” buttons. **One product (REFRSH) shows as “Sold Out”** on the homepage. Below that: a “SHOP BY GOAL” section with 4 image tiles (Athletic Performance, Muscle Building, Weight Loss, General Health). A “Stacks & Bundles” collection exists with 4 pre-built stacks.

Verdict: IMPROVE

Why: Showing a sold-out product (REFRSH) in the “Best-Sellers” section is a direct conversion leak --- visitors click “Add to Cart” and hit a wall. The “Stacks & Bundles” page has pre-built stacks only, not an interactive builder. AOV from a static stack is lower than letting customers build their own 3-product combination with a 20% discount incentive --- the latter gives them agency and the brand captures item affinity data. The goal-based section appears below the fold with no product previews.

Reference Benchmark: Ghost’s “Build-Your-Own Ghost Bundle” page lets visitors pick any 3 products, save 20% one-time or 25% with subscribe. Clean split layout with product grid on left, running bundle cart on right, toggle between subscription and one-time purchase. HD Muscle’s goal-based nav (by workout phase) drives more purposeful browsing than generic goal tiles.

Recommended Action:

1. **Immediately:** Hide sold-out products from the homepage Best-Sellers section, or replace with a “Notify Me” variant that captures back-in-stock emails.
 2. Add an interactive “Build Your Stack” page --- allow picking any 3 products for a 20% bundle discount. Surface it in the nav as “BUILD YOUR STACK” and on the homepage as a dedicated module.
 3. Upgrade the “Shop By Goal” tiles to preview 2—3 products per goal with prices, rather than just linking to a collection.
-

5. SOCIAL PROOF

Current State: “REAL PEOPLE. REAL RESULTS” section with 4.97/5 aggregate from 671 reviews (powered by Judge.me). Star breakdown bar chart visible. Customer photos & videos carousel (204 photos, 27 videos). Individual review cards with product name, date, reviewer name, and review text. Award badge icons visible. Product cards in Best-Sellers show individual star ratings.

Verdict: KEEP + IMPROVE

Why: The social proof section is a genuine strength. 4.97/5 from 671 reviews is unusually high quality and the UGC photos/videos create authentic trust. However, it sits far below the fold --- a cold visitor who bounces in the first 10 seconds never sees it. The star rating aggregate doesn’t appear near the hero or above the fold at all. Additionally: no press logos, no “as featured in” section, no third-party certifications (NSF Certified, Informed Sport, etc.) are visible anywhere on the homepage.

Reference Benchmark: BPN surfaces its social scale in the hero itself (“JOIN THE 925,000+ CUSTOMERS”). Ghost displays certification badges and influencer associations closer to the fold.

Recommended Action:

1. Add the aggregate review score (4.97 stars · 671 reviews) to the hero section or in the announcement bar alongside free shipping.
 2. Add a trust bar below the hero: “Delivering Results Since 2005 | 4.97-star Rated | Endorsed by Elite Athletes | [Certification Badges]”
 3. Surface the award badges more prominently --- if Magnum has industry awards, they should be immediately visible, not buried in a review section.
 4. Add 2—3 select customer review pull-quotes near the product cards in the Best-Sellers section.
-

6. LOYALTY / POINTS PROGRAM

Current State: Does not exist. /pages/loyalty returns 404. /pages/rewards returns 404. No mention of a points program, referral incentive, or repeat-purchase reward anywhere on the site or in the navigation.

Verdict: ADD --- High Priority

Why: A loyalty program is the single highest-LTV lever available to a supplement brand. Repeat purchase rates in the supplement vertical are the primary driver of profitability --- a customer who buys Quattro protein every 6—8 weeks for 2 years is worth 10x a one-time buyer. No loyalty mechanism means Magnum is relying entirely on email re-engagement and hope to drive repeat purchases, while competitors are creating a points economy that rewards the habit of buying from them. This is also a missed data capture opportunity: a loyalty program surfaces purchase frequency, product affinity, and referral behavior.

Reference Benchmark: Ghost Lifestyle has LOYALTY as a **top-level navigation item**. The Ghost Loyalty page includes: dedicated branding (“GET REWARDED FOR STUFF YOU ALREADY DO”), a clear 3-step onboarding (Log in, Code Entry, Redeem), gamified achievement badges, multiple earn vectors (Make a Purchase, Refer a Friend, Redeem Points, Celebrate Birthday), and a code entry system tied to product packaging that drives unboxing engagement. Gymshark also has “Gymshark Loyalty” visible in footer and menu.

Recommended Action: Implement a loyalty program (Smile.io, LoyaltyLion, or Yotpo Loyalty are standard on Shopify) before the next major campaign. Structure it with points per dollar spent, bonus points for social follows and reviews, birthday bonus, and referrals. Add “LOYALTY” to the main desktop nav and mobile menu. Promote it in the homepage hero, in post-purchase emails, and on product pages.

7. QUIZ / PERSONALIZATION / DATA CAPTURE

Current State: Does not exist. /pages/quiz returns 404. No personalization entry point on the homepage, in the nav, or in any CTA. The “Shop By Goal” section links to collections but does not ask any qualifying questions.

Verdict: ADD --- High Priority

Why: A product recommendation quiz is the highest-converting personalization mechanic for supplement brands, because customers frequently don’t know what combination of products they need. A quiz drives three outcomes simultaneously: (1) personalized product recommendations that increase first-purchase AOV, (2) zero-party data capture (goals, training frequency, di-

etary restrictions, budget) that enables 1:1 email segmentation, and (3) extended session time that signals purchase intent to retargeting algorithms. Magnum's homepage offers no path for a first-time visitor who doesn't know the product lineup.

Reference Benchmark: BPN's "TAKE THE QUIZ" is a **top-level primary navigation item** at the same level as SUPPLEMENTS and BEST SELLERS. The quiz page opens with full-screen branding: "PEAK PERFORMANCE STARTS HERE. You can get back to training in 5 minutes." The quiz link also appears in the footer under Support, and on the homepage as a CTA alongside a "START HERE: TAKE THE QUIZ" prominent button.

Recommended Action:

1. Build a 5—7 question quiz (tools: Octane AI, Typeform embedded, or Prehook for Shopify): Name, Goal, Training frequency, Experience level, Budget --- then recommend 2—3 products and a stack.
2. Add "TAKE THE QUIZ" to the desktop nav and mobile menu.
3. Add a quiz entry point on the homepage: "Not sure where to start? Take the 2-minute quiz."
4. Gate quiz results behind email capture: name + email = personalized stack recommendation sent to inbox.

8. ATHLETE / AMBASSADOR PROFILES

Current State: "Team Magnum" exists as a nav item (desktop and mobile) and links to /pages/athlete-page. It is also listed in the footer under Company as "Athlete Program." No athlete is featured on the homepage. No athlete photo, name, quote, or profile teaser appears anywhere in the homepage scroll.

Verdict: ADD (to homepage)

Why: Athletes are Magnum's trust multiplier. If elite competitors use and endorse the products, that is the most powerful social proof signal a supplement brand can display --- more than aggregate reviews, more than award badges. Hiding athletes behind a menu link means a visitor has to already trust Magnum enough to explore deeper pages before discovering the endorsements. The trust signal needs to be on the homepage, not buried.

Reference Benchmark: PVL's athlete page has a well-structured card layout: athlete photo, name, sport and level (e.g., "BRANDIE WILKERSON --- OLYMPIAN / PRO BEACH VOLLEYBALL"), short bio, plus "FOLLOW" and "LEARN MORE" buttons that drive social following and deeper engagement. Multiple athletes across multiple sports are shown in a scannable grid.

Recommended Action:

1. Add an athlete spotlight strip or section to the homepage: 3—4 athlete cards (photo, name, sport, “Shop [Athlete]’s Stack” CTA). This creates both trust and a personalized shopping entry point.
 2. Expand the /pages/athlete-page to match PVL’s depth: individual profile pages with training regimen, supplement stack, competition history, and social links.
 3. Link athlete profiles to actual product recommendations --- “Train like [Athlete Name]: their stack” drives both inspiration and conversion.
-

9. CONTENT & EDUCATIONAL SECTIONS

Current State: “Magnum Blog” is linked in the footer under Company. No blog preview, no article teaser, no educational content appears anywhere on the homepage. No ingredient education, no “why formulation matters” section, no how-to guides or training tips.

Verdict: ADD (lightweight)

Why: Educational content on a supplement brand’s homepage serves two CRO functions: (1) it signals expertise and builds trust with skeptical buyers who want to understand what they’re putting in their body, and (2) it captures organic search traffic from “best creatine monohydrate” and “what does pre-workout do” queries that convert at high rates. Currently, Magnum’s homepage is 100% promotional with zero trust-building educational anchors.

Reference Benchmark: BPN’s footer links to Articles, Videos, Podcasts, and Recipes under a dedicated “LEARN” column. Ghost has “GHOST BLOG” and “BUILDING THE BRAND” under their nav as a content hub. Both brands use content to extend the trust funnel.

Recommended Action:

1. Add a 3-tile “From The Magnum Blog” section above the footer: recent articles, each with a cover image, title, and “READ MORE” CTA.
 2. Add a short “Why Magnum” section (3—4 icons + copy lines) that explains formulation philosophy: “Encapsulated formulas. No proprietary blends. Science-backed ingredients.” This can live just above the review section and addresses the trust deficit for new visitors.
-

10. FOOTER

Current State: 4-column layout: Supplements (subcategory links), Goals (goal collection links), Company (Contact, About, Trade Partner, Athlete Program, Blog, Careers, Shipping & Returns, Privacy, T&C), Brand column (Delivering Results since 2005 copy, social links). Payment methods shown at bottom. Email capture inline above footer with no incentive (“Subscribe and stay up-to-date on all things Magnum”). Copyright and legal links.

Verdict: KEEP + IMPROVE

Why: Footer structure is clean and well-organized relative to competitors. The email capture inline is the weakest element --- “stay up-to-date” is zero-motivation copy. The “Company” column buries the athlete program. Missing: loyalty link, quiz link, any trust signal (certifications, security badges).

Reference Benchmark: BPN’s footer has a dedicated “LEARN” column (Articles, Videos, Podcasts, Recipes, About) alongside SHOP and SUPPORT columns, with quiz prominently under Support. Ghost’s footer includes clear account and loyalty entry points.

Recommended Action:

1. Replace footer email form copy: “Join 50,000+ Customers --- Get Exclusive Deals & Early Launches” with a clear email input.
 2. Add “LOYALTY” and “TAKE THE QUIZ” links to the footer.
 3. Add a row of trust badges/certifications between the review section and the newsletter form.
-

11. PAGE SPEED & TECHNICAL CRO SIGNALS

Current State: Rotating hero carousel (multiple full-size product images). Klaviyo popup fires on page load. Judge.me review widget with 20+ visible reviews and UGC photos/videos (204 photos, 27 videos) loaded on the homepage. Multiple sold-out products shown in the Best-Sellers carousel (REFRSH is out of stock but still displayed). The announcement bar rotates through multiple messages. Third-party scripts: Klaviyo, Judge.me.

Verdict: IMPROVE

Why: The combination of a carousel hero (multiple large images), an immediate Klaviyo popup, a Judge.me widget rendering 20+ reviews and 230+ UGC assets, and rotating announcement bar messages creates significant first-load weight. Carousels are known to cause cumulative layout shift (CLS) --- a Google Core Web Vital metric. A sold-out product in the homepage best-sellers is a direct conversion killer: it creates a failed “Add to Cart” experience that erodes trust.

Recommended Action:

1. Switch hero to a static image (or at most 2 slides, user-controlled). Lazy-load non-hero product images.
 2. Move Klaviyo popup trigger to 30-second delay or exit-intent --- reduces LCP interference.
 3. Lazy-load the Judge.me review widget --- it doesn't need to block initial render.
 4. Add a filter in the Best-Sellers section logic to exclude any unavailable products. Show a "Notify Me" product in its place that captures back-in-stock emails.
 5. Consolidate the announcement bar to a single static message: "FREE SHIPPING ON ORDERS OVER \$100" --- this one message does the work; others are noise.
-

Priority Matrix

Priority	Recommendation	CRO Impact	Effort	Reference
1	Add product recommendation quiz (“TAKE THE QUIZ” in nav + homepage module)	High	Med	BPN
2	Implement loyalty/points program (Smile.io or LoyaltyLion) --- promote in nav, hero, footer	High	Med	Ghost
3	Remove sold-out products from homepage Best-Sellers; replace with back-in-stock capture	High	Low	Internal
4	Upgrade email popup: add goal-selection step, state specific % discount, delay trigger	High	Low	Ghost
5	Build interactive “Build Your Own Stack” page --- any 3 products, save 20%	High	Med	Ghost
6	Add athlete spotlight strip to homepage (3—4 cards with sport + “Shop their stack” CTA)	Med	Low	PVL
7	Replace rotating carousel with single static hero --- add brand value prop + review aggregate	Med	Low	BPN
8	Add trust bar below hero (years in business, review aggregate, certifications)	Med	Low	BPN
9	Restructure mobile menu: add Search bar, goal-based top level, Loyalty + Quiz links	Med	Med	Gymshark
10	Upgrade desktop nav: add LOYALTY top-level, “Build Your Stack” in dropdown, mega menu by workout phase	Med	Med	HD Muscle / Ghost
11	Add footer email form incentive copy (“Join 50,000+ Customers --- Get Exclusive Deals”)	Med	Low	Ghost
12	Lazy-load Judge.me widget and hero carousel off-screen images	Med	Low	Technical
13	Add 3-article blog teaser section above footer	Low	Low	BPN / Ghost
14	Add “Shop By Goal” product previews (2—3 products per goal tile vs. just collection links)	Low	Med	Internal

Priority	Recommendation	CRO Impact	Effort	Reference
15	Expand athlete profiles to individual pages with stack recommendations	Low	High	PVL

Feature Gap Analysis

Feature	Status	Verdict	Reason
Goal-segmented email popup	Missing	Adopt	Asks fitness goal before email capture; drives segmentation at same conversion rate as generic discount popup
Interactive “Build Your Own Stack” builder	Missing	Adopt	Highest AOV lever available. Ghost’s version (pick 3, save 20%) can be built on Shopify in days
Loyalty / Points Program	Missing	Adopt	No supplement brand relying on repeat purchase can afford to skip this. LTV impact is category-defining
Product Recommendation Quiz	Missing	Adopt	BPN’s top-nav quiz is a proven template. Octane AI on Shopify can be deployed in under 1 week
”TAKE THE QUIZ” as primary nav item	Missing	Adopt	Signals to visitors that the brand prioritizes finding the right product, not just selling anything
Athlete-linked product recommendations	Missing	Adopt	”Train like [Athlete X]: their stack” converts aspiration into immediate purchase action
In-nav loyalty link	Missing	Adopt	Ghost has LOYALTY at the same level as SUPPLEMENTS --- surfaces the program to 100% of site visitors
Workout-phase mega menu	Missing	Adopt	HD Muscle’s Pre-Workout / Intra / Recovery / Protein / Health organization is more intuitive than category names alone
Brand mobile app with loyalty integration	Missing	Evaluate	High effort but meaningful LTV driver if loyalty program exists. Evaluate after loyalty is live
Subscribe & Save mechanic	Missing	Evaluate	Ghost’s bundle builder has Subscribe & Save 25% toggle. Worth evaluating once loyalty is in place
UGC creator/ambassador community program	Missing	Evaluate	Ghost has “MEET THE FAM” and a trading cards system. High-effort brand play; evaluate at a later stage

Feature	Status	Verdict	Reason
Apparel line	Missing	Skip	Ghost and Gymshark are apparel-led. Magnum's brand identity is supplement-first; apparel dilutes focus
